WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Cut a strip 86 mm wide and 985 mm long from 1.5 mm aluminium.

Bend it round the plate outline (front view), starting at the bottom of the load side; the ends overlap 30 mm there.

Bend the tight curves over a 50 mm round bar; ease the long straights by hand. Keep the edges straight and square.

Rivet eight small aluminium angle tabs inside the band, 3 mm in from each edge: four for each plate, spread round the outline.

Drill each tab and the plate behind it 4.5 mm for an M4 screw.

Fit: the band sits between the plates, flush with their edges.

It goes on last, after the chains are tensioned.

Check: no gap wider than 2 mm between the band and either plate; turn the shafts by hand: nothing rubs the band.
