WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Laser cut two spiders from 6 mm steel: three arms 45 mm wide at 120 degrees, round ends of 22.5 mm radius, a 96 mm centre disc.

Holes: 76 mm in the centre for the hub; 20 mm for each stub axle, 150 mm from the centre (260 mm apart, hole to hole).

Hub: a 1610 weld-on taper-lock hub, 76 mm across and 26 mm long, through the centre hole, 10 mm proud each side; weld both sides.

Stub axles (make 6): 20 mm bright bar cut to 55 mm; drill 8.5 mm and tap M10 20 deep in one end. Push through each 20 mm hole, plain end flush with the spider's inner face; weld both sides.

Make the two spiders as a mirrored pair: stubs on the outer side.

Check: the stubs are square to the spider within 0.5 mm over 50 mm, and all three at 150 mm, within 0.5 mm, from the centre.
